PROFESSIONAL SUMMARY

Full-stack engineer working across calling, payments and customer support at Cooee — mostly Go on the backend and React/Next.js on the frontend. Comfortable owning a feature from the first API question to the deploy, and shipping things that hold up under real usage.

EXPERIENCE

- Graduate Software Engineer — Full Stack** | Cooee Sept 2025 – Present
- Converted to full-time after internship. Own the Cooee Business web app — onboarding, team management, usage dashboards and payments — from first prototype to live deploy.
 - Led the move to a new customer support platform end to end — backend, web app, ticket migration and cutover — with a one-switch rollback if anything goes wrong.
 - Built in-app support chat with real-time updates, plus agent tooling that puts a customer's account and call history in front of support, so issues get resolved faster.
 - Built calling features — international calling over WebRTC and socket signaling, call forwarding, subscriptions and auto top-ups.
 - Build backend APIs and services in Go, with RabbitMQ for background job processing.
 - Own major frontend modules across the Cooee web app in React, Next.js, Tailwind and Firebase.
 - Led the marketing site move from WordPress to Next.js with a headless CMS, country-specific pages, SEO improvements and GA4 tracking across marketing and product.
- Software Developer Intern** | Benfi Consultants Pte Ltd Jul 2024 – Nov 2024
- Developed and optimized backend APIs using Django to support internal business intelligence workflows.
 - Explored and evaluated LLMs (Qwen series) for automating analytics generation and reporting.
 - Contributed to early prototypes of an AI-driven home assistant and analytics tooling.

TECHNICAL SKILLS

Languages : Go, TypeScript, JavaScript, Python, C, Solidity
Frontend : React, Next.js, Redux, TanStack Query, Tailwind CSS, HTML, CSS
Backend & APIs : Go (REST APIs), Express.js, Django, RabbitMQ
Real-Time Systems : WebRTC, WebSockets, Socket Signaling
Databases & Storage : PostgreSQL, MySQL, Firebase, Supabase, BigQuery
Infrastructure & Platforms : Cloudflare Workers, AWS Amplify, Auth0, Stripe, Sanity CMS, Git
Testing & Analytics : Playwright, Google Analytics 4

PROJECTS

- CallCheck: VoIP Network Tester** | Next.js, TypeScript, Go May 2026
- Built a free in-browser tool that checks whether a network is ready for VoIP calls, measuring latency, jitter, packet loss and MOS score.
 - Grew out of WebRTC calling work; live at callcheck.gopikrishnanb.co.in.
- Draft Arena: Football Drafting Game** | Next.js, TypeScript, Supabase, Postgres, OpenRouter 2026
- Built a head-to-head game where two managers snake-draft an all-time XI, on one phone or in live online rooms with a 60-second pick clock.
 - Draft rules are enforced in Postgres; an AI judges both squads and calls a winner in one of four personalities. Live at draft.gopikrishnanb.co.in.
- DeCarb: A Carbon Credit Marketplace** | Next.js, Tailwind, Express.js, Solidity, Web3Auth, Razorpay 2025
- Built a decentralized carbon credit marketplace with wallet onboarding and fiat payments, so non-crypto users can buy, sell and retire credits.
 - Finalist at SIGHT 2.0 (UST) and Runner-up at BlockHash LIVE Ideathon.

EDUCATION

Saintgits College of Engineering, Kerala CGPA: 8.42/10
B.Tech in Computer Science and Engineering (Minor: Robotics and Automation) 2021 – 2025
Kendriya Vidyalaya Pattom, Thiruvananthapuram 96%
AISSCE — Science Stream (Computer Science) 2020 – 2021

AWARDS & CERTIFICATIONS

Research Publication — “Security in Metaverse” | Springer CCIS, ICAISM 2025
Runner-up — Web3 for India 2030 Ideathon | Kerala Blockchain Academy, BlockHash LIVE 2023
Finalist — SIGHT 2.0 | UST 2024
Project Showcase — ETHIndia 2023
Intel Unnati Summer Internship Program | Intel Corporation 2023
Programming, Data Structures and Algorithms Using Python | NPTEL
Web Development Bootcamp | Udemy
